What is REIN PRP?

Rein PRP medical kits are designed for fast & efficient PRP separation. With this, you'll get perfect concentration of Platelet Rich Plasma (PRP) every time you use it. Concentration of platelets determine the amount of growth factors per sample of blood, which in turn effects the speed of healing.

PRP or Platelet Rich Plasma is a concentration of Platelet cells taken from the patient's blood, and these platelets have growth factors that may help in the healing process of chronic injuries.

These platelets are the Centre of PRP Therapy which is derived from the blood drawn from the patient's arm. It will be put in a centrifuge and spun at a certain RPM. That forces the blood components to separate. The resulting blood will have distinct components of Red Blood Cells (RBC), Normal Plasma (PRP) and Platelet Rich Plasma (PRP). The PRP portion of the blood is then separated and injected into the injured area.

Injection with PRP increases the amount of soft tissue generation, including the tendons, ligaments, as well as collagen and cartilage. Another benefit of PRP Therapy is that it is taken from the patient's body, so there's no matching to be done and no risk of rejection.

The idea is that injecting PRP into damaged tissues will stimulate your body to grow new, healthy cells and promote healing. Because the tissue growth factors are more concentrated in the prepared growth injections, researchers believe that the body's tissues will heal faster.

REIN PRP DUO

The REIN PRP DUO kit offers all the tools that the physician will need during the treatment in a single kit, 100% sterile and ensuring a fast and safe application which increases the adaptation of the patients to the treatment. Considering the physicians who would prefer a higher PRP concentration in one application, we included in our kit 2 pieces of 10 ml vacuum tube containing 1 ml sodium citrate each.

The tubes used are not blood separation/storage tubes. These are human injectable tubes that fulfill CE Class IIB requirements, they have undergone necessary biocompatibility tests. Kit 1 is a complete PRP Kit approved with CE certification.

CONTENT:

- ✓ 2 pcs 10 ml vacuum tube containing 1 ml sodium citrate
- ✓ 1 pc 5 ml luer lock syringe
- ✓ 1 pc 18G 90mm spinal needle
- ✓ 1 pc holder
- ✓ 1 pc 21G 0.8*38mm needle
- ✓ 1 pc 21G 0.8*40mm needle

REIN PRP MULTI

REIN PRP 6-tube package consists of 6 pieces of 10 ml vacuum tubes containing 1 ml sodium citrate each. Ideal for Hospitals, Clinics, Branch Centers, where the supportive medical supplies required for treatment are available. It has been designed and approved to enable you to provide appropriate treatment to up to 6 patients with this product alone. The sodium citrate used in REIN PRP Kits has a CE certificate, 3,13% Ph. Eur. or 3.8% Erg.-86. It is a high quality component with value.

All of our products are produced in our facilities, which have a clean room in accordance with "ISO Class 7" standards, and it is also confirmed by current validation measurements, without leaving aside our high quality.

Our kits are approved by the notified body (2195) and certified with a CE Class IIB certification by Notified Body/ According to Annex II (excluding section 4), Section 3 of the directive 93/42/EEC on medical devices. Also our product performances are measured by regular tests by independent organizations.
